(Headline & Product Intro)

Why Elevated Triglycerides Can Be As Dangerous As High Cholesterol

You may have heard triglycerides mentioned by your doctor, but what you may not know is that high triglyceride levels can be as dangerous as high cholesterol.

Many people with elevated cholesterol often have a triglycerides problem. But it's also possible to have normal cholesterol while having elevated triglycerides. And this can make your heart health vulnerable.

Triglycerides are fatty deposits in your blood. Your body stores them to use later as energy. Normal triglyceride levels are essential for good health. But high triglyceride levels are dangerous because they cause your blood to thicken. When this happens, you're more prone to clotting and blockages. The end result? An increased risk of heart attack and stroke.

The best strategy to achieve optimum heart health is lower your bad LDL cholesterol and triglycerides and boost good HDL cholesterol. And you can accomplish all three tasks with one all-natural supplement....Cholesterol Complete™

Benefits of Cholesterol Complete™:

- Lowers Triglyceride Levels with Natural Ingredients
 - Reduces Total Cholesterol 40 Points in 40 Days or Get a Full Refund!
 - Boosts Good HDL Cholesterol
 - Key Ingredient Policosanol Lowers Bad LDL Cholesterol -- which can Cling to Artery Walls Causing Blockage
 - Avoid Dangerous, Costly Statin Drugs
